Main shareholders :	Dr. Markus Binding Dipl. Ing. Jan Gressmann George Aman Dr. Wilhelm von Trott zu Solz
Managing Directors:	Dr. Markus Binding Dr. Wilhelm von Trott zu Solz

### The COMP-ANY business description

COMP-ANY GmbH is an international company specialised in providing waste management solutions in combination with climate protection and energy recovery.

All elements of profitable waste management, from concept design to detailed engineering, from sale or lease of technology to full operation of facilities, are offered to municipal and commercial customers.

Our core competencies in biological waste management include processes like composting, mechanical-biological waste treatment („MBT“), biological soil remediation as well as biological drying, waste inertisation and landfill remediation.

Our company holds intellectual property rights like patents and trade marks. With our team of experienced engineers we are constantly improving products and processes and are striving for innovation, resulting in increased end-user benefits.

We are playing an active role as share holder in joint venture companies with local partners of the waste management industry like Think Environmental Ltd. in Britain. In our subsidiaries in the UK, Ireland, Singapore and Malaysia we present us as a full service technology partner.

Focussed on emerging countries waste management activities are combined with the production of certified emission reductions, so-called „carbon credits“ within the clean development mechanism of the Kyoto protocol. Modern waste

management by COMP-ANY contributes to climate protection in avoiding green house gas emissions from untreated waste disposed off at landfills/dumps.

As a result of COMP-ANY's waste treatment some waste fractions can be exploited as recyclables, valuable secondary combustibles or refuse derived fuel which are used for production of renewable energy in form of electricity and heat.

We achieve three goals with our approach: We manage waste in an environmentally friendly manner, simultaneously protect the climate and allow substitution of fossil fuels by waste derived secondary resources. Closing the cycles of matter and energy is our core interest – for the benefit of mankind and nature.

### The COMP-ANY management

Dr. Markus Binding:

Markus Binding left St. Gallen University, Switzerland in 1995 with a Ph.D. in economics after having studied agricultural science and graduated as master of arts in political sciences in Munich, Germany. He built up and led the global business unit "solid waste treatment" in W.L. GORE & Associates GmbH from 1995 till 2002, the inventor of famous GORE-TEX® membrane. Within this function he was involved in the technical development of waste treatment covers as well as responsible for sales and market development. In 2002 he founded COMP-ANY. As managing director he is responsible for strategy and finance as well as for legal/contractual affairs and investor relations.

Dr. Wilhelm von Trott zu Solz:

Wilhelm von Trott graduated as veterinarian from Munich University and was promoted Dr. med. vet. in Giessen, Germany. From 1986 to 2001 he was in various management positions in BAYER AG, Germany, Central America, Mexico and Italy. From 2001 to 2009 he was member of the management team and responsible for global marketing of Boehringer Ingelheim Animal Health GmbH. Wilhelm von Trott is engaged in various charity organisations and served as member of the board and chair of the fundraising and communications committee for the African Medical Research Foundation (AMREF) in Nairobi, Kenya.

In COMP-ANY management he is the responsible managing director for marketing & sales and human resources.
